## DETAILED ACTION

### *Election/Restrictions*

1. Claims 4 and 8 stand withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim.

Election was made **without** traverse in Paper No. 4.

Applicant's election without traverse of Group I, claims 1-3 and 5-7, in Paper No. 4 is acknowledged.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. **Claims 1-3 and 5-7** are rejected under 35 U.S.C. 103(a) as being unpatentable over Suzuki et al. (4,877,717)

Regarding **claims 1 and 2**, Suzuki et al. discloses a resin-cemented optical element comprising a base member (Fig. 6B-6D, #1) and a resin layer (Fig. 6B-6D, #2) formed on a surface of the base member, wherein the resin layer (Fig. 6D, #2) is in a thickness of 300  $\mu\text{m}$  or smaller (see col. 9, lines 49-51 and see Fig. 9) at least at a part of a region within 1 mm from the peripheral edge face of the resin layer. However, Suzuki et al. fails to disclose the resin layer in a thickness of 850  $\mu\text{m}$  or larger at a position which is thickest in the resin layer. The thickness of

Art Unit: 1772

the thicker portion of the resin layer would be readily determined through routine experimentation by one having ordinary skill in the art depending on the desired end results. Therefore, it would have been obvious to one of ordinary skill in the art at the time the applicant's invention was made to have provided the thicker portion of the resin layer in Suzuki et al. with a thickness of 850  $\mu\text{m}$  or larger, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art absence of showing unexpected results. *In re Boesch and Slaney*, 205 USPQ 215 (CCPA 1980).

Regarding **claim 3**, note at least a part of the region outside an effective-diameter region, the resin layer has a thickness which becomes gradually smaller toward the periphery (Fig. 6D, #2). Regarding **claims 5-7**, note an optical article comprises the resin-cemented optical element according to claims 1 and 2 (see col. 1, lines 7-14).

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The patents are cited for further teachings of optical elements similar to that instantly disclosed.
